

ABDULLAH SAUD

Senior Software Engineer | AI-First Developer | Early-Stage Product Builder

New Delhi, India | +917983029296 | abdlhsaud@gmail.com | [LinkedIn](#)

SUMMARY

- Backend Engineer with **6+ YOE** building and operating **production-grade** SaaS platforms.
- Built products from the **ground up** as an early engineering hire, working directly with customers and **stakeholders** to translate real-world workflows into scalable systems.
- Experienced in designing **integration-heavy systems**, including CRM integrations, data ingestion pipelines, and real-time data synchronization across external services.
- Currently **leading** the efforts for creating LLM-powered **conversational** agents at XBE.

SKILLS

Languages & Frameworks: Node.js, Express, Python, FastAPI

Web Development: React.js, JavaScript, REST APIs, GraphQL

Databases: MongoDB, **PostgreSQL**, Redis, DynamoDB, Supabase

Distributed Systems & Cloud: Microservices, gRPC, GitHub Actions, CI/CD, Docker, AWS **Lambda**, **Serverless**

AI & Developer Tools: LLM APIs integration, Agent orchestration, AI-assisted development (Claude, Devin, Codex), RAG

Testing & Observability: Rspec, Jest, Datadog, CloudWatch, Grafana, Prometheus

WORK EXPERIENCE

XBE

Senior Software Engineer

Remote, Chicago

Aug 2025 – May 2026

- Introduced **AI-assisted development workflows** across the team, built prompt libraries, and automation for PR reviews and technical spec generation.
- Integrated **speech-to-text** (STT) and **text-to-speech** (TTS) services to enable **voice-based** interaction flows in internal Agent tool.
- Built an **engineering scorecard tool** that analyses commit activity, PR timelines, and deployment data to highlight delivery risks, development efforts and team bottlenecks.
- Developed **conversational** workflow agents to automate internal developer support tasks, enabling automated task execution

UPSCALE AI

Principal Engineer (Founding Member & First Hire)

Delaware, US

Dec 2020 – July 2025

- **First engineering hire**, responsible for designing and building a **Sales Engagement SaaS platform** from the **ground up**, defining the backend architecture and core system design.
- Built and operated distributed microservices handling **13 CRM** integrations, **OAuth2** authentication, real-time **bi-directional** data sync, **webhook** ingestion, and **large-scale** async processing.
- Designed **real-time messaging pipelines** using WebSockets to support **conversational** and workflow-based interactions.
- Maintained reliability of backend services using CloudWatch, X-Ray, alerts, and dashboards, significantly improving on-call response and incident detection time.
- Engaged directly with **customers** and **investors** to understand **product requirements** and translated those insights into core platform architecture and engineering decisions.

NINELEAPS (LinkedIn Top 25 Startups, 2018 & 19)

Software Engineer

Bengaluru, India

Jan 2019 – Dec 2020

- Worked on **Elasticsearch-backed** search **services**, tuning index mappings and query DSL to improve search latency.
- Improved multiple slow endpoints via query optimisation and database schema refactoring.
- Set up centralised log forwarding using Overseer and built Grafana dashboards to monitor application behaviour.
- Created containerised development environments using **Docker** for backend services and dependencies to mirror CI pipelines, helping surface integration issues earlier during development.

EDUCATION

Bachelor of Technology, Computer Science - **Graphic Era University**

June 2015 - July 2019
